

GENERAL INFORMATION

LOW WATER FISHING - Check power generation schedule. Normally, no generating Saturdays and Sundays. During low water periods, expect to wade and drag boats over shoals. Water is extremely cold. Flat bottom boats with motors up to 10 HP or canoes with small motors are best. During low water, don't expect to motor upstream.

POWER GENERATION PERIODS - Generation usually begins about mid-morning on week days. River is swift, dangerous in places. Ideal floating for canoes without motors. Fisherman can motor either direction during generation periods.

ACCESS - Free boat launching at Game & Fish areas at Winkley Bridge (Barnett Access), Lobo Access (adjacent to trout dock), and Ramsey Access at Pangburn. Poor access to river where highways bridge the river. Most private land with access is posted. Free ramp also below dam near trout hatchery.
